JavaScript I

JavaScript II

JavaScript III

JavaScript IV

Applied JavaScript

Build Week: User Interface

React

Intermediate React

Single Page Applications

Redux

Build Week: Front End

Building RESTful Web APIs with Express and Node.js

JavaScript I

JavaScript I will expose you to some deeper concepts based on some of the things you already have learned during the pre course material. As we dive a bit deeper, you'll gain a better understanding of the fundamentals of the JavaScript programming language. The concepts that you already know about are.

- Variables
- Arrays
- Objects
- Functions

This particular module is designed to go quite a bit deeper into these subjects. We will also be covering these concepts quite rapidly, but each concept lends itself to the next, so you get a lot of exposure while combining some or all of these points.

At the end of this module, you should be able to:

- use function declarations, expressions, and arrow functions and describe their differences
- use let, const, var and demonstrate their differences
